

# What We'll Cover

- FTP - why it should be the first tool in your web developer toolbox.
- HTML basics, what's involved in writing it and understanding the basic elements of a webpage.
- Cascading Style Sheets (CSS) and how they control the presentation of HTML.
- Javascript and its role in user interaction, how it integrates and why it matters.
- Flash and what role it plays in presentation, interaction and the ups and downs of using it.
- PHP and ASP will be discussed in very general terms with an eye toward use of dynamic pages and Content Management Systems.
